

SCANIA FLEET POSITIONING

Allows you to track and monitor your fleet in near real-time 24x7, with all your trucks and connected assets shown in a consolidated view in your My Scania fleet management tools. With tracking of accumulated driving times, maps showing each vehicle's speed, route and location, geofencing functionality and connection to the Fleet App you have the important tools at your disposal to help maximise efficiency and productivity.

SCANIA FLEET POSITIONING

The fleet positioning service brings full vehicle tracking into your fleet management system. With a 1 minute update interval of all data providing a near real-time view of each vehicle, you can easily add points of interest, or use features such as geofencing to generate alerts when entering or exiting particular zones with e.g. pre-defined restrictions or rules.

To stay on top of your operation – all your vehicles are shown in a near real-time map view, also displaying the route taken thus far as well as the accumulated driving time – which naturally helps with planning further trips. Additionally, the truck's performance can be shown, tracking data points such as the relationship between speed, fuel level and reductant over time.

Monitoring Report and Service Planning are also automatically included with the Fleet Positioning service.
