

SCANIA VEHICLE PERFORMANCE

Tracking the performance of your vehicles is key to minimising their fuel consumption and delivering on your sustainability targets. By comparing vehicles of similar configurations, you can easily identify outliers and drill down into the details that can be optimised. Vehicle performance also allows you to generate automated environmental reports for both individual vehicles and the entire fleet – which can be an important help when it comes to securing new contracts.

SCANIA VEHICLE PERFORMANCE

Vehicle Performance provides a detailed overview of multiple data parameters tracked over time – which enhances the understanding of the real-life fleet operation and helps identify unnecessary waste.

A summary view is provided as a widget on the front page of the fleet management tools in My Scania, and reports parameters from your fleet shown as basic graphs. In the detailed view you can select time periods for analysis of your fleet with intervals as small as one hour. You can also easily update the standard report template by adding or removing parameters to suit your needs – or create an entirely new report template from scratch.

The environmental reports which can be generated display calculated emissions of CO₂, NO_x, and hydrocarbons for any selected time period for both individual vehicles and the full fleet. And if running on alternative fuels, the emission specifications are customisable to ensure accuracy.

Quick facts

- Save money through identifying unnecessarily high fuel consumption.
- Secure contracts by proving your sustainability / environmental impact.
- Relevant for any size or type of operation.
- Summary overview with graphs.
- Custom time interval reports, both for overall vehicle performance and environmental impact.
- Maintains detailed logs of performance history.
- Shows important parameters such as e.g.: Fuel usage and time spent while idling, Percentage of time driven in Power mode, Harsh brake applications / 100 km, Time spent speeding (determined by user-customisable speed limit).
- Requires a connected vehicle equipped with a C200 or later Scania Communicator.
- The service is only available as part of the Control Package.
