

# SCANIA FLEXIBLE MAINTENANCE

DATA DRIVEN INDIVIDUAL MAINTENANCE PLANS FOR EACH UNIQUE VEHICLE TO MAXIMISE UPTIME

Our service business is about maximising your vehicles uptime, productivity and sustainability. With Flexible Maintenance, the data from the individual vehicle, its specification and its operational circumstances ensures that the right maintenance is performed at the right time, with minimum effect on productivity. With Scania Flexible Maintenance you know exactly what you get: The confidence to always stay productive, and to always deliver on your customer promise.

# SCANIA FLEXIBLE MAINTENANCE

With our Flexible Maintenance contract, you should never have to call us trying to book a short notice service visit. In fact, through connected data from your truck, we'll notify you when we see maintenance is due – in good time so we can schedule the visit during your planned downtime.

A Scania Flexible Maintenance plan is updated continuously using live operational data from your vehicle. This ensures that every vehicle receives exactly the maintenance it needs, not more and not less – with a plan that is optimised specifically for your business and the operation of the vehicle. And thanks to notifications from our Scania maintenance system the workshops know when a vehicle is due for maintenance. That way they can ensure the right parts and components are in stock, and can contact you well in advance – which allows you to schedule your operations accordingly and keep productivity to a maximum.

## Benefits, features and requirements

- Tailored for your unique operation.
- Smart scheduling based on real vehicle data, with continuous updates of maintenance plan.
- Maximum uptime.
- Peace of mind.
- Sustainable ownership and maintenance practises.
- Possibility to include Bodywork and Trailer equipment in maintenance price and plans – depending on distributor.
